Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 11-13,15-16,20-24,27-30 are finally rejected under 35 U.S.C. 103(a) as being unpatentable over Admitted Prior Art on page 1 of the specification in view of Timaiuolo and Haines (US 3,835,995) or Katzner et al. (US 6,155,423) and Cronk et al. (US 6,769,428). Admitted Prior Art discloses external patch rolls composed of a dispenser core and strip-like patch wrapped around the outer perimeter side. The external patches are usually constructed with a support made of nonwoven fabric, an adhesive layer laminated on one side thereof and a covering attached to the adhesive layer in a releasable manner. Admitted Prior Art does not disclose two covers adjacent to the roll and the specific material.

Tomiuolo teaches an adhesive bandage on a strip of material. The bandages are separated by perforations or slits. It would have been obvious in view of Tomiuolo to provide covers attached to the spool to surround the edges of the strip to prevent contamination.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the cover out of ployacrylonitrile resin and the core out of polyethylene terephathalate resin, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. In re Leshin, 125 USPQ 416.

Application/Control Number: 10/049,162

Art Unit: 3728

Admitted Prior Art also does not disclose the tear off cutting lines. Haines or Kntaer et a1. teaches laminated package with perforation lines. Perforation lines separate the individual units on the package. It would have been obvious in view of Haines or Kntzner et a1. to provide perforations that extend through the laminated layers to facilitate separation of the units. The position of the tear off cutting lines are substantially identical to that of the tear off cutting lines in the rest of the laminated layers.

With regard to the percutaneous absorption drug, Cronk et al. teaches an adhesively applied strip. The strip has a support layer 230, an adhesive 232 with a drug thereon. The drug consists of transdermal substances and antihistamines. It would have been obvious to provide drug such as antihistamines, ephedrine, etc on the adhesive layer as a type of medication for usage.

3. Claims 17-18, 25 are finally rejected under 35 U.S.C. 1O3(a) as being unpatentable over the references applied above with respect to claims 11 and 20, further in view of Praneo et a1. (US 5,924,573) and Kennedy (US 5,655,659) and Augst et a1. (US 5,496,605). The modified reference does not disclose the width and spacing of the perforation slits. But one of ordinary skill in the art would determine the proper width of the slit and the spacing between the slits through routine experiments. Hence, it would have been obvious to provide a width of 1.0-2.0 mm and a slit spacing of 1.0-1.5 mm and the breaking strength of 7.36-15.24 kgf/48 mm by experimenting different size of cut and location. The slit width and spacing is to facilitate separation of a portion of the tape type support. To make the slit a certain width and to determine the spacing therebetween is an indication of how much effort a user has to assert in order to separate a portion of the tape type support. One of ordinary skill in the art would readily

Page 4

Application/Control Number: 10/049,162

Art Unit: 3728

recognize different width and spacing as conventional knowledge to improve the timing strength required of a user. Piraneo et al., for example, teaches that the slit pattern is selected to allow easy opening and removal of the article. Augst et al. teaches that when the spacing between perforations are too long it is difficult to separate and accidental and unintended separation is likely when the perforations are too short. The reference discussed the right tensile strength should be determined to prevent premature separation and sufficient reduction in tensile strength to ensure easy and consistent separation. August et al. achieved the result by considering various variable and test the variables. Finally, Kennedy is also cited to show that spacing between perforations is about 1.02mm.

Response to Arguments

4. Applicant's arguments filed on 3/29/06 have been fully considered but they are not persuasive. Applicant argues that Admitted Prior art based on Japanese publications 55-134822 and 56-60730 and they do not disclose a continuous coating of an adhesive all over one side of a tape support, nor do they disclose or suggest a covering layer on the adhesive layer. However, applicant on page 1 and paragraph 1 under Background Art section, specifically disclosed the general knowledge of an adhesive coating on a support and a cover over the adhesive coating in a releasable manner. What the Japanese publications disclosed do not alter the fact that the disclosure on the support, adhesive and cover on page 1 of the specification is generally known in the art as already admitted by applicant. Therefore, applicant's argument does not overcome the application of the prior art in the rejection.

Application/Control Number: 10/049,162

Art Unit: 3728

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

Conclusion

5. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Telephone inquiries regarding the status of applications or other general questions, by persons entitled to the information, should be directed to the group clerical personnel and not to the examiners. In as much as the official records and applications are located in the clerical section of the examining groups, the clerical personnel can readily provide status information without contacting the examiners, M.P.E.P. 203.08.

Art Unit: 3728

If in receiving this Office Action it is apparent to applicant that certain documents are missing, e.g., copies of references cited, form PTO-1449, form PTO-892, etc., requests for copies of such papers should be directed to Erica Miller at (571) 272-4370.

For applicant's convenience, the official FAX number is (703) 872-9306. This practice may be used for filing papers not requiring a fee. It may also be used for filing papers which require a fee by applicants who authorize charges to a PTO deposit account. Please identify Examiner <u>Luong</u> of Art Unit <u>3728</u> at the top of your cover sheet of any correspondence submitted.

Inquiries concerning the merits of the examination should be directed to Shian Luong whose telephone number is (571) 272-4557. The examiner can normally be reached on M-H from 7:00am to 4:00pm EST. Examiner's supervisor Mickey Yu can be reached at 571-272-4562.
